CYBERSECURITY AWARENESS GAME

PRESENTED BY:

SHRUTI KUMARI (24EARCS159)
SIYA GUMBER (24EARCS162)
SNEHA (24EARCS163)
SWATI JAIN (24EARCS171)
UPASNA YADAV (24EARCS177)

Think. Detect. Protect.

AN INTERACTIVE DESKTOP APPLICATION USING ADVANCED JAVA

Introduction

Cyber security means protecting computers, mobile phones, networks and personal information from online threats.

This project is a small awareness game that teaches users how to stay safe while using the internet.

Phishing, malware and weak passwords are common security risks.

Users need practical guidance to recognize warning signs.

This project turns key security lessons into an interactive desktop game.

03

Objectives

1. Create awareness about common cyber threats.
2. Identify suspicious links and messages.
3. Encourage strong passwords and safe browsing.
4. Make learning easy through a quiz game.
5. Receive feedback and review mistakes.

04

Problem Statement

THE CHALLENGE

- Users may not recognize phishing attempts.
- Weak or reused passwords can put accounts at risk.
- Security advice can feel abstract without practice.
- People may not receive immediate feedback on decisions.

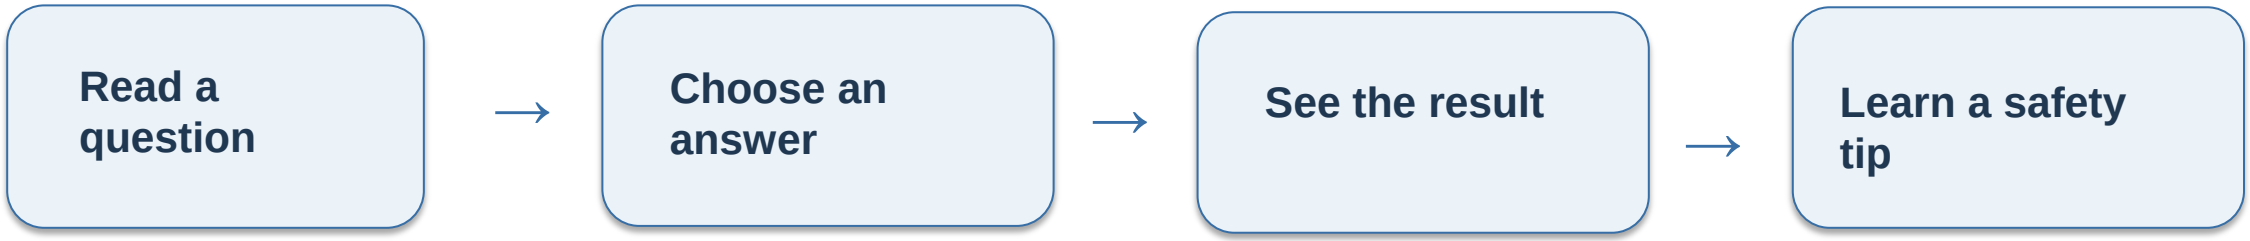

THE NEED

- Present cyber risks in simple language.
- Offer short, interactive learning activities.
- Explain why an answer is safe or unsafe.
- Encourage safer decisions through repetition.

05

Proposed Solution

The proposed solution is a simple quiz-based cyber security awareness game.

HOW GAME WORKS

- Users explore cyber security topics through quiz-style activities.
- Scenarios introduce realistic situations such as suspicious emails.
- Answers can be checked and explained with immediate feedback.
- A score or result summary can help users review their learning.

06

Main Features

Cyber Safety Quiz

Questions about common online situations.

Score System

Shows how many answers are correct.

Safety Tips

Gives a short explanation after an answer.

Simple Interface

Easy to understand and use.

Technologies Used

Possible technologies for a Java desktop version:

- **Java** Main programming language
- **Java Swing** For desktop screens and buttons
- **Eclipse IDE** For writing and running code
- **JDBC** Database connectivity

MAIN MODULES

HOME

Main menu & navigation

QUIZ

Cyber security questions

PHISHING

Spot suspicious messages

PASSWORDS

Learn secure habits

RESULT

Show score, if available

Module Description

1. **User Module:** Allows users to start the game and answer cyber security questions.
2. **Quiz Module:** Displays questions related to cyber threats and online safety.
3. **Answer Validation Module:** Checks the selected answers and identifies correct and incorrect responses.
4. **Score Module:** Calculates and displays the user's score based on correct answers.
5. **Feedback Module:** Provides explanations and safety tips to help users learn from their answers.
6. **Result Module:** Displays the final score and summarizes the user's performance.

Example: Cyber Safety Questions

1. A message asks for your password. What should you do?

Answer: Never share your password. Report or delete the suspicious message.

2. An unknown link promises a free prize. What should you do?

Answer: Avoid clicking it and check whether the source is genuine.

3. What makes a password safer?

Answer: Use a long, unique password and enable two-factor authentication.

Benefits and Future Scope

Benefits

- Easy way to learn cyber safety.
- Encourages safe online habits.
- Useful for students and beginners.

Future Scope

- Add more questions and levels.
- Include a timer and badges.
- Save scores for each user.

Conclusion

The Cyber security Awareness Game teaches basic online safety in a simple and interactive way.

By answering questions and reading safety tips, users can learn to recognize common threats and make safer choices online.

This project shows how Java can be used to develop an educational desktop application. In the future, more questions, levels, and security tips can be added to make the game more useful and engaging.
